

Statement

4iG Plc. recently acquired a defence industry portfolio as part of the N7 Group of companies, which includes Hirtenberger Defence Europe GmbH (Commercial Register No. FN462693). White phosphorus-containing products associated with the operations of Hirtenberger Defence Europe GmbH form part of a legacy business activity that has long been publicly disclosed and documented. This product category is not strategically significant and contributes only marginally to the financial performance of both Hirtenberger Defence Europe GmbH and 4iG Space and Defence Technologies Plc. Hirtenberger Defence Europe GmbH's core business continues to focus on the development and manufacture of conventional mortar systems and ammunition.

The remaining orders relating to the tactical products concerned – used for smoke screening and target marking – are fulfilled exclusively for customers in Western European NATO member states or through NATO procurement channels. The phase-out of this product segment is already underway, and no new orders for white phosphorus-containing products are being accepted. Once the existing contractual commitments have been fulfilled, 4iG Plc.'s temporary exposure to products containing white phosphorus will cease entirely.

4iG Group does not engage, and does not intend to engage in the future, in business activities involving controversial weapons, as defined by internationally recognised responsible investment and ESG frameworks.
